THE ZEPPELIN SYSTEMS TRAINING PROGRAM

We will train your team of experts - on your premises, in-house at one of our locations or in a virtual meeting room. The training program covers all relevant topics from the functionality of our products, inspection and maintenance to your specific requirements. We qualify your specialists individually.

TRAINING CONTENTS

The Zeppelin training program has a modular structure. Therefore the training modules can be selected from both theoretical and practical parts and can be designed according to individual needs. The training courses can be held either at the customer's site or at Zeppelin Systems locations. If the training courses are held in Friedrichshafen, there is a possibility to show live demonstrations in the Zeppelin technical center.

In addition to the basic modules, we also offer training courses specially tailored to your plant. You will determine the focus of the training, e.g. plant-specific designs, PFD & PID reviews, process flow explanation or customer-specific functional descriptions. All theoretical modules are also offered as online trainings. Here you can select the contents from the various basic modules.

TARGET GROUP

Select the appropriate modules according to your field of activity. The training courses are aimed at operators, maintenance personnel, master craftsmen and engineers. The level and depth of content of the selected modules will vary depending on the group of participants. The trainings can be booked for each product segment in Zeppelin plant engineering.

Training courses for basic information and functional principles of components and technologies are best suited to understand the deeper details and scientific backgrounds of process engineering plants. Practical training courses are designed for maintenance and service topics.

AIM OF THE TRAINING

The training program helps to understand the technical principles of the components and systems in order to operate plants safely and efficiently.

 **ZEPPELIN**[®]
WE CREATE SOLUTIONS

The three Zeppelin training packages at a glance:

TRAINING PACKAGES

BASIC MODULES

THEORETICAL TRAININGS

1

1 day basic training

- 4 x 90 min training blocks
- Lunch, electronic handout** and certificate
- 3-10 participants
- 650,00 € net / person

2

3 hours online training

- 2 x 90 min training blocks
- 3-10 participants
- 300 € net / person

Technologies

- Pneumatic conveying systems*
- Hydraulic conveying systems
- Pellet cleaning*

Components

- Silo
- Rotary feeder
- Diverter valve
- Filter

* including demo in the Zeppelin Technology Center

PRACTICAL TRAININGS

3

1 day basic training

- 1 h training block - theory
- 5 h training block - practice
- Lunch, electronic handout** and certificate
- 2-3 participants
- 1.850,00 € net / person

Components

- Rotary feeder CFM ***
- Rotary feeder CFH***
- Diverter valve VST- and TST ***

*** Maintenance and repair

** printed handouts can be created on demand

USEFUL INFORMATION

- The prices are based exclusively on the above mentioned basic modules and the training period.
- The basic modules cover the topics in general, they are not customer specific.
- Training modules that are not listed, such as other technologies and products, are available upon request.
- Customized training contents, theoretical as well as practical, practical trainings at your site, travel bookings or other wishes can also be offered. These are associated with additional costs.

Request your personal training package, tailored to your needs. The above mentioned modules are only an extract of many possible combinations.
